

Mould Treatment

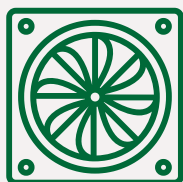

We are committed to making sure your home is safe to live in and we will carry out all work to resolve any mould in your home.

Mould is a type of fungus that grows in damp places, like bathrooms, kitchens, or around windows. It can look fuzzy or discoloured, often black, green, or white and spreads by releasing tiny spores into the air. Mould can cause musty smells and may affect your health, especially if you have allergies or breathing issues.

Once we have identified mould, the next steps include:

1.

Checking that your extractor fans work and replace or service your extractor fans if needed

2.

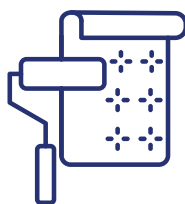

Checking your home for any contributing problems and repair these as required

3.

Treating the mould to kill the spores, this may include applying thermal paint - usually over two treatments

4.

Letting you know how long any work needed will take. Usually one or two weeks, but this may take longer if any major works are needed

5.

Providing advice on how to limit condensation in your home

If you are still having problems with damp and mould following your treatment or have any questions, get in touch with us:
